PROFESSIONAL SUMMARY

Senior Data Scientist with 6+ years of experience building intelligent systems and ML solutions for procurement, e-commerce, and risk assessment domains. Specialized in RAG systems, agent orchestration, and generative AI applications using LangGraph, LangSmith, and Vertex AI. Gold Medalist in Big Data and Analytics with proven expertise in developing AI agents, multilingual systems, and ML engineering with CI/CD pipelines.

EXPERIENCE

Senior Data Scientist

Feb. 2025 – Present

Jaggaer

Hyderabad, India

- Worked on **LangSmith** orchestrator and **LangGraph** to build an agent orchestrator for the procurement domain that directs different user requests; implemented RAG system where agent runs and directs to nodes, retrieves chunks from Google Cloud Storage, ranks them (also experimented with Pinecone), and replies to users
- Tracked metrics including Faithfulness, Answer Relevancy, and Contextual Precision/Recall using RAGAs and DeepEval; integrated with GitHub for CI/CD pipeline automation; **improved performance and reduced processing time by 37%**
- Architected a no-code automation workflow using n8n platform with REST API integration and event-driven email triggers for streamlined data processing pipelines
- Developed an intelligent conversational agent leveraging Google Vertex AI platform for automated ticket booking functionality and e-commerce order management with natural language processing capabilities
- Engineered a multilingual video localization system with automated translation capabilities for English-to-Italian, French, and Spanish conversion, implementing synchronized audio dubbing and subtitle generation for users
- Built a real-time cost analytics dashboard using Streamlit framework integrated with AWS Cost Explorer API to monitor resource utilization and expenditure metrics for generative AI applications

Data Scientist

Oct. 2022 – Nov. 2024

RapidCanvas

Hyderabad, India

- Designed and implemented a content-based **recommendation system utilizing natural language processing** and collaborative filtering techniques to deliver personalized book recommendations, enhancing customer engagement
- Leveraged advanced statistical modeling techniques and data mining algorithms to construct a comprehensive credit risk assessment framework, enabling precise customer segmentation and informed decision-making for risk mitigation strategies
- Implemented robust feature engineering pipelines for structured and unstructured data, **improving model accuracy by 35%** through advanced preprocessing techniques
- Demonstrated proficiency in leveraging the Shopify platform, integrating machine learning models to build prediction services, and seamlessly writing back data to Shopify databases
- Developed containerized machine learning applications using Docker, implementing CI/CD workflows for seamless model deployment and tracking
- Conducted in-depth sales data analysis to uncover valuable insights, identifying customer behavior patterns and opportunities for targeted marketing campaigns

Data Scientist

Jun. 2021 – Oct. 2022

Eaton

Pune, India

- Designed and deployed scalable machine learning pipelines using AWS SageMaker and Python, improving predictive **model performance and reducing processing time by 40%**
- Conducted advanced customer segmentation using sophisticated clustering algorithms, providing data-driven insights to business stakeholders
- Built automated ETL processes and data transformation scripts to streamline complex data workflows, focusing on data quality and platform efficiency

Assistant System Engineer

Mar. 2018 – Jul. 2019

Tata Consultancy Services

Noida, India

- Developed sophisticated fraud detection systems using advanced machine learning techniques in the Fintech domain, demonstrating expertise in anomaly detection and optimization

- Implemented modular, clean code architectures following software engineering best practices for robust and maintainable systems
- Collaborated across cross-functional teams to drive process improvements and streamline business requirement processes

Data Scientist (Intern)

PowerSchool

Aug. 2020 – May 2021

Bengaluru, India

- Leveraged advanced statistical methods (t-tests, ANOVA) and ML models (logistic regression, random forests) to cluster students and identify key factors influencing achievement
- Implemented complex feature engineering techniques and developed robust analytical models to identify patterns and trends in educational datasets
- Collaborated with cross-functional teams, including educators and subject matter experts, to ensure effective integration of data-driven solutions

PROJECTS

Large Language Model: Customer Interaction Analyzer | Python, Hugging Face, Docker, AWS

2024

- Developed a sophisticated LLM-powered system for analyzing customer interaction data using advanced NLP techniques to derive business insights
- Implemented fine-tuning strategies on pre-trained transformer models to improve sentiment and intent detection, showcasing expertise in Deep Learning frameworks
- Created scalable microservices architecture using Docker for model deployment and containerization (MLOps)
- Utilized AWS cloud infrastructure for model training, tracking, and real-time inference, ensuring production readiness

AI-Powered Resume Matching System | Python, LLMs, AWS S3, Git CI/CD

2023

- Engineered an intelligent resume screening system using Large Language Models and prompt engineering to automate candidate-job role matching
- Developed a sophisticated scoring algorithm providing percentage-based matching, improving hiring accuracy by 40% (demonstrable ROI)
- Deployed the system using automated CI/CD pipelines, ensuring consistent updates and maintaining system reliability (MLOps)

TECHNICAL SKILLS

Generative AI: LangGraph, LangSmith, LangChain, LlamaIndex, GPT, Llama, Claude, Vertex AI

Vector & Embeddings: Pinecone, Chroma, FAISS, OpenAI Embeddings, Sentence Transformers

Agent Frameworks: CrewAI, Langflow, Multi-agent Systems, RAG Systems

Machine Learning: TensorFlow, PyTorch, Scikit-learn, Keras, XGBoost

Programming: Python, R, SQL, Pandas, NumPy, SciPy

Cloud & DevOps: AWS, Azure, Docker, CI/CD, Git, Langsmith

Data Management: MySQL, Snowflake, BigQuery, PostgreSQL, MongoDB

Visualization: Tableau, Power BI, Streamlit, Matplotlib, Plotly, Seaborn

Multimodal AI: ElevenLabs, Azure Speech, Whisper, Text-to-Speech

EDUCATION

Vellore Institute of Technology

Vellore, India

Master's in Big Data Analytics, Gold Medalist

2019 – 2021

- Advanced Coursework: Machine Learning, Deep Learning, Advanced NLP, Distributed Computing

BBD University

Lucknow, India

Bachelor of Computer Science

2013 – 2017
